

AIRJAVELIN Pro

THE NEW AIRJAVELIN IS A PCP!

For the AirJavelin Pro, it was decided that a pressure increase of nearly twice that of the original AirJavelin CO2 air rifle would give the arrow a big jump in power without compromising the integrity of the High-Pressure Shaft technology arrow or the AirJavelin. The original 7.4 cubic inch tank design has a regulated pressure of 1,500 psi and only takes 7 minutes to fill with the Umarex ReadyAir Portable Airgun Compressor. This way to fill PCP arrow airguns fills directly through a single Foster quick disconnect fitting to a pressure of 4,500 psi giving a shot count of up to 25 without shots on just one fill!

The AirJavelin Pro easily breaks the threshold of the lowest energy produced by a traditional bow, at 52 ft. lbs. The AirJavelin Pro is capable of taking any game.

LIGHT WEIGHT AIR ARCHERY

Introducing the newest PCP arrow, the Umarex AirJavelin Pro! Following most of the same features as the original AirJavelin CO2 arrow rifle, but the integrated fluorine rail and M-LOK slots, ambidextrous butt handle, and collapsible stock, the AirJavelin Pro and original AirJavelin do have some key differences. The new AirJavelin Pro notably features an all-new FCS stock, a 4,500 psi high-pressure air reservoir, and Foster quick connect 1/8" port. It's a PCP regulated at 1,500 psi meeting 25 consistent shots on a full tank of air. The AirJavelin Pro arrow design is consistent and lightweight while still launching a 570 gr Umarex arrow downrange at a whopping 12 ft./lb.

SPECIFICATIONS

- PCP - Pressurized AirJavelin Pro
- Velocity 370 ft/s
- 52 ft. lbs. with 570 gr Umarex AirJavelin Arrows
- 1,500 psi Regulator
- 7.4 cu. in. / 123.2 cu. Capacity Air Tank
- 25 Effective, Ethical Shots on a Single Fill
- 7 minutes to fill with the Umarex ReadyAir Airgun Compressor
- Ambidextrous Butt Design
- Manual Push Button Safety
- 4.25 in. Single Stage Trigger
- Integrated Fluorine Rail and M-LOK Slots for Mounting
- Lightweight, Modern Polymer Adjustable Stock
- Integrated Grip Slot
- Overall Length: 33 in. - 34.25 in.

NEW FOR 2022 - THE UMAREX AIRJAVELIN IS GOING PRO!

Progress comes along in one of two primary forms for products... improvements made to existing products and completely new products. Two years ago when we released the CO2 powered AirJavelin to the world, we did the latter - that is break the mold with the first mass produced CO2 powered air rifle gun. The AirJavelin, in case you forgot...

KINETIC ENERGY → APPROPRIATE GAME LESS THAN 52 FT. LBS.

Distance and shot placement are vital to a humane harvest.

Quick Valve Release Technology creates a streamlined airflow from the PCP tank to the high-pressure air tube. This allows for less energy displacement and gives you the maximum power needed for every shot.

HPS Technology allows Umarex AirJavelin Arrows to withstand up to 1,500 psi of compressed air inside the carbon fiber glass shafts. Max pressure, max strength, plus max front pounds of kinetic energy equals a devastating shot.

PCP Release Technology delivers highly accurate, consistent, and virtually result free shooting. With up to 1,500 psi of compressed air it now delivers an kinetic front pound energy for the toughest game.

Straight Flight Technology Arrows receive energy directly to the front of the arrow while conventional arrows. This allows the energy to drive the arrow straight without bending, holding true to the statement "straight as an arrow."
